✂ TECHNICAL SKILLS & COMPETENCIES

- AI-Driven Development & Agent Deployment:** Proven experience in full-lifecycle AI Agent engineering (from Prompt Design → Tool Calling → Production Deployment). Highly proficient with ChatGPT, Claude, Copilot, and Cursor. Expert in Prompt Engineering, structured outputs, multi-model collaboration, and workflow orchestration. Strong competency in AI+RPA, AI+Enterprise systems, and automated data analysis scenarios.
- Backend Development:** Robust command of C/C++ (including STL and Qt development environment); experienced in PHP development using ThinkPHP and Yii frameworks along with RESTful API standards; proficient with Python for core data extraction and automation tasks.
- Frontend & Cross-Platform:** Highly skilled in cross-platform development (Desktop & Mobile) using Flutter. Well-versed in modern web tech stacks including JavaScript, Vue.js, HTML/CSS, and uni-app for full-stack interactive client-side logic.
- Database & Caching:** Proficient in SQL CRUD optimization, MySQL index tuning, and performance troubleshooting. Familiar with Redis memory caching mechanisms and Navicat database management.
- DevOps & Deployment:** Solid hands-on experience in Linux systems and production environments. Skilled in deploying and optimizing LNMP (Linux+Nginx+MySQL+PHP) architectures, server health load configuration, and server log monitoring.
- Network Programming:** Clear comprehension of concurrency models including process/thread pools and multiplexing mechanisms (Select, Epoll). Familiar with TCP/IP protocol stacks, network interface design, and communication tuning.
- Professional Soft Skills:** Experience in cross-cultural/overseas collaborations. Fluent English certified by CET-6, with outstanding capability in processing and mastering complex English technical materials. Expert with Git/Gitee for version management, Postman for API validation, and Jira/Wiki for Agile project collaboration.

👛 PROFESSIONAL EXPERIENCE

Company	Industry	Position	Duration
Changsha Kejiulai Network Technology Co., Ltd.	Software Services	Head of Digital Transformation	Dec 2023 - Dec 2025
Shenzhen Han's Robot Co., Ltd.	Smart Manufacturing	Computer Vision Engineer	May 2022 - Jun 2023
Beijing Yizhun Intelligent Technology Co., Ltd.	Smart Healthcare	C++ Software Engineer	Jun 2020 - Apr 2022

🧠 SELECTED PROJECT EXPERIENCE

1. AI Agent Application Matrix (Independent Developer / Lead) Nov 2025 - Present

Location: Shenzhen | Tech Stack: OpenClaw, Selenium, Multimodal LLMs, Prompt Engineering, RAG

- Leveraged LLMs and multimodal vision engines to empower vertical niche industries, engineering a 24/7 background operation automation matrix.
- PetCare AI (Intelligent Veterinary Consultation Agent):** Spearheaded multimodal model fine-tuning and the construction of an RAG medical knowledge base (Redline Index). Developed a system parsing "symptom prompts + skin/discharge image inputs" to achieve diagnostic triage. Engineered a proprietary **three-color triage algorithm** to guarantee medical suggestion safety, outputting structured drug use and medical consultation loops.
 - RPA Smart Business Bot for WeChat:** Independently architected the real-time closed-loop interfaces connecting WeChat control terminals, automated RPA web scraping, and backend databases. Integrated NLP intent parsing (text/voice to structured commands) with Selenium scripts to enable silent, 24/7 background inventory matching, financial reconciliation, and corporate warning systems.
 - AI Smart Store Inspection Auditor:** Built a retail inspection pipeline utilizing OpenClaw task-chain orchestration and multimodal models (SKU detection, OCR, display analysis). Integrated with Feishu Workflow to automatically trigger tickets and issue tasks immediately when anomalies are found, making offline store audits lightweight and digital.

2. Cexiong Smart Pet Store POS & Retail ERP System

Dec 2023 - Dec 2025

Location: Changsha | Tech Stack: Flutter, uni-app, Native Mini-Programs, Vue.js, Element UI, WebSocket, ThinkPHP, MySQL, Redis

Controlled the secondary engineering, core framework programming, and production rollout of an omni-channel retail architecture spanning PC POS, Mini-Program Mall, and ERP backend.

- **Full-Stack Feature Engineering:** Programmed cross-platform clients using Flutter and uni-app for multi-terminal checkouts and retail features. Developed backend workflows and APIs via ThinkPHP, natively provisioning B2C retail, medical workstations, pet grooming booking, procurement automation, and inventory management.
- **System Architecture & Optimization:** Designed decoupled frontend-backend models, adopting WebSockets for millisecond-level data sync across clients. Integrated Vue.js + Element UI for dashboards, optimizing MySQL queries and Redis layers to eliminate performance lags during heavy big-data reporting.
- **Team Governance & Impact:** Managed the core technical squad and enforced rigorous code review/collaboration standards. Successfully deployed the system across **20+ franchise locations**, driving corporate digital transformations to cross **RMB 2 million in monthly revenue**.

3. Elfin Series 6-Axis Collaborative Robot Pre-Research

May 2022 - Jun 2023

Location: Shenzhen | Tech Stack: OpenCV, PCL (Point Cloud Library), ROS, CMake, gRPC, WebSocket, JsonCpp, Boost.Asio

Contributed to core computer vision algorithms and backend pre-research, managing AGV locomotion control, visual inspection, path planning, and C++ plugin interface architectures.

- **Computer Vision Framework:** Programmed a high-performance 3D vision framework leveraging OpenCV and PCL to handle target identification, automated pose estimation, and robotic arm grasping-coordinate matrices within unstructured factory floors.
- **Pluggable Architecture Design:** Built a C++ plugin infrastructure enabling hot-swapping and modular dynamic loading of low-level vision/localization algorithms inside ROS environments, successfully ****shortening core algorithm iteration cycles by 50%****.
- **Communication Engineering:** Developed a multi-threaded TCP/UDP layer via Boost.Asio, integrated with gRPC and WebSockets to route telemetry data between AGVs and host mainframes, ****compressing network latency to under 100ms****.

4. Breast Ultrasound Intelligent AI Diagnostic System

Jun 2020 - Apr 2022

Location: Beijing | Tech Stack: Qt, OpenCV, RapidJSON, Convex Hull Algorithms, TcpSocket, log4qt, Base64-MD5

The industry-first AI assistant for ultrasound machinery, deploying Neural Architecture Search (NAS) to run live diagnostic processing, segmentations, and benign/malignant predictions.

- **Real-time Stream Infrastructure:** Programmed a specialized TcpSocket stream framework to ingest raw ultrasound video feeds, bypassing heavy HTTP handshake overloads. Stabilized live video telemetry and minimized packet frame drops during continuous clinical feeds.
- **UX & Workstation Optimization:** Developed the clinical UI workstation using Qt, leveraging OpenCV to optimize raw video playback, capturing, and local snapshot logging, ****shaving 25% off clinicians' average operational overhead****.
- **Data Visualization & Compliance:** Applied RapidJSON to handle asynchronous inference results, using convex hull mathematics to map lesion dimensions dynamically. Implemented a double-layered Base64-MD5 salted encryption block to secure patient data, fully satisfying hospital information security evaluations.

EDUCATION

Central South University of Forestry and Technology

Full-time Bachelor • Information Technology and Management

Sep 2016 - Jun 2020

SELF-EVALUATION

A versatile Full-Stack Software Engineer with substantial R&D expertise extending from low-level computer vision algorithms and LLM Agent design to high-concurrency enterprise frameworks. Capable of leading independent structural architecture design, complex database/network tuning, and managing product life-cycles from end to end. Possesses a solid background in engineering squad leadership and execution of digital transformations for multi-million-dollar retail ecosystems.
